

Conference Announcement on Biofuels 2020

Muhammad Usman

Former Director General of Agricultural Research System, Agricultural Research, Pakistan, E-mail: usmankhan1949@yahoo.com

Biofuels and **Bioenergy** is the branch of **Chemical Engineering** that is involved in the study of Fuels and energy. Biofuels may be come up with from agricultural crops including conventional food plants or from special energy crops. Biofuels or second generation biofuels are processed from numerous types of biomass called lignocellulosic **biomass**. First generation biofuels are in order to change from the sugars and vegetable oils formed in used crops, which can be smoothly extracted applying conventional technology. In comparison the **advanced biofuels** are made from biomass or woody crops, agricultural remnant or waste, which makes it tougher to extract the requisite fuel. **Biofuel technologies** have been come up with because **first generation biofuels** have few major limitations. First generation biofuel can be make practically but restricted in most cases there is a limit above which they cannot yield enough biofuel without forbidding food supplies and biodiversity.

The **Biofuels 2020** is an event that aims to explore the ways to innovate in the field of Biofuels, and Bioenergy at London, UK on March 23-24, 2020. The conference will serve as a platform to bring together leading Chemical Engineering professors with different specialties. **Biofuels 2020** will discuss on the topics such as Advanced Biofuels, Bioenergy, **Algal Biofuels**, Production of Biofuels, Biomass, Bioethanol, Renewable Energy, and Challenges in Research on Advanced Biofuels and Bioenergy, Environmental Impacts of Biofuels

Biofuels 2020 supported by the organizing committee network of renowned scientific and professional expert such as **Alireza Heidari**, President of the American International Standards

Institute (AISI), USA, **Marcelo Henrique Prado da Silva**, Military Institute of Engineering, Brazil, **Muhammad Usman**, Former Director General of Agricultural Research System, Pakistan, it provided a platform for collaboration among colleagues, vendors, and academia to reveal new innovations, solutions, ideas, and emerging technologies in Biofuels.

The demand for biofuel has significantly increased over the past decade by policies, such as the Renewable Energy Directive (RED) and the Fuel Quality Directive of the European Union region, which has introduced a 7 percent renewable energy coming from food and feed crops in the transport sector by 2020. Moreover, the exacting mandates set by various countries to combined biofuels with regular fuels, to lessen the dependency on fossil fuels, has further increase the demand for biofuels across the world. According to the combine mandates set by the US, China, and Brazil, 15-27% blend of biofuels with conventional fuel by 2020-2022.

Biofuels Conferences going to be held during March, 2020 to December, 2020 at various cities in Europe (London, Barcelona, Madrid, Valencia, Rome, Milan, Berlin, Frankfurt, Vienna, Zurich, Dublin, Edinburgh.... And Many More..!!)
